

BESTUFS II WP3-3rd Roundtable

Urban freight data harmonisation and modelling ?

Short introduction to the debate

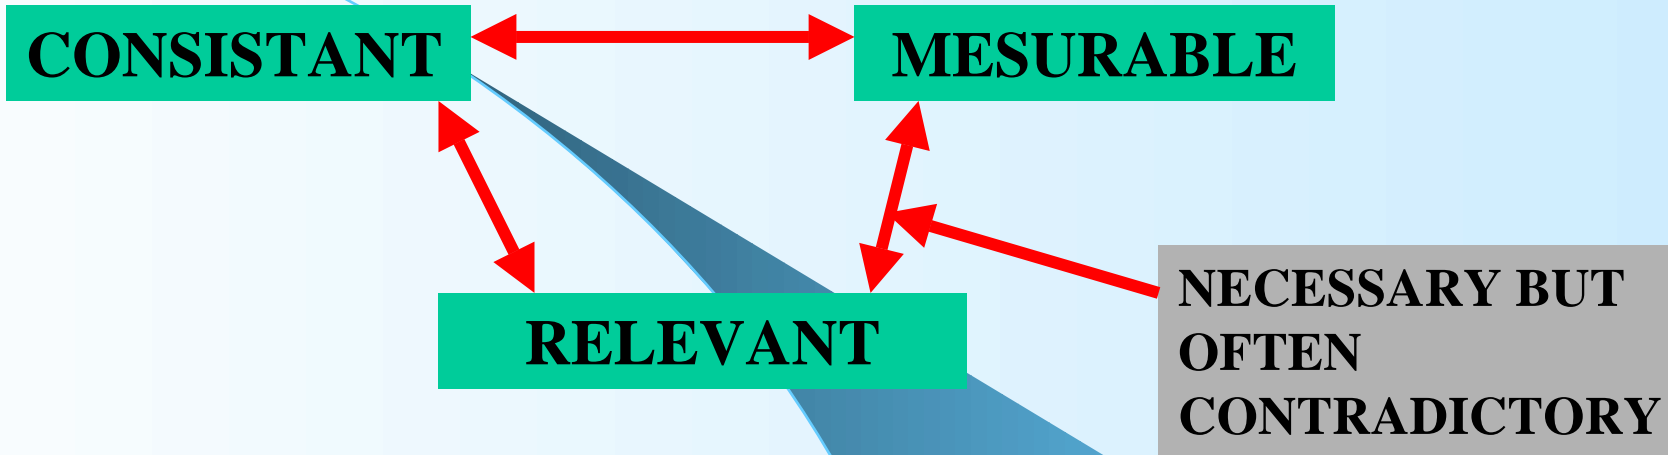

BRRRC, BRUSSELS- 03/04 May 2007

Alain BONNAFOUS, laboratoire d'Économie des Transports, Lyon, France

Three conditions for a model

...and a contradiction

The contradiction can be solved by a reduction of the object

- Only a simulation of the mileage

- Only a simulation of the optimal itinerary

- Only a simulation of a new UDC

- Only the optimisation of the fleet

-

Or by a methodological innovation

If you do not reduce the object and if the model is not innovative....you can add this warning to the model :

« Any resemblance of the model to the reality is purely accidental. »

Thank You
